

## Milestone 7

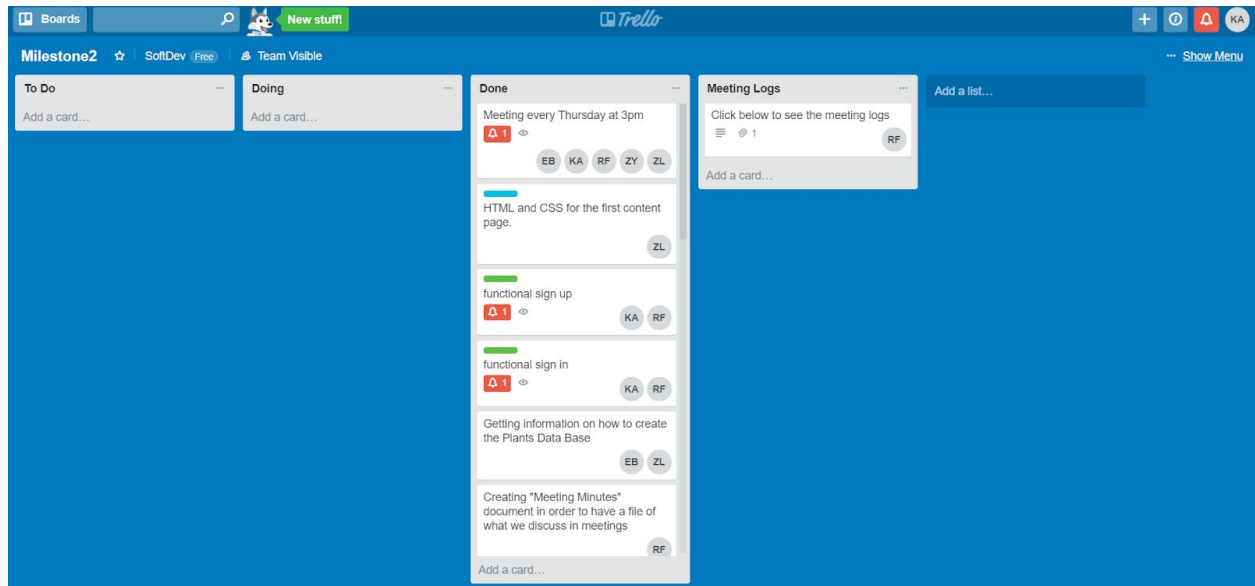

### Plant Care

- Khalid Aldawood
- Erika Bailon
- Zhenqi Li
- Zijun Liu
- Ruth Fernandes
- Zhengwu Yuan

### Project Tracker

#### Trello

<https://trello.com/b/WZ4XfBWb/milestone2>

### VCS Repository

#### Github

<https://github.com/Zhenqi-Li/Plants-busters>

(README.md with description is under the Master branch)

All of the files in Github are final and finished. We have continuously been updating the repository throughout the semester so all the old files have been overwritten. You could check all the commits to see the history of the files. We do not see it necessary to put a tag on the final codes as all of the files in the repository are the final version of our codes.

## Contributions

Mar 11, 2018 – May 9, 2018

Contributions: Commits ▾

Contributions to Back-end, excluding merge commits

Most of the contributions are under Zhenqi Li, due to the environment we used to deploy the website. He was the only one who had the platform running and therefore we would send him files, databases, text,

information, through slack, and he would submit it to github to run it on the platform.

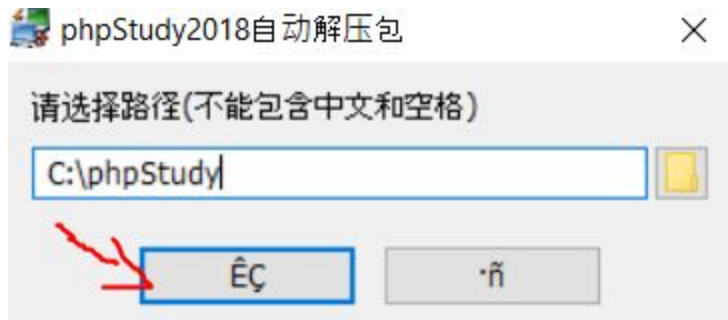

## Deployment

### Phpstudy

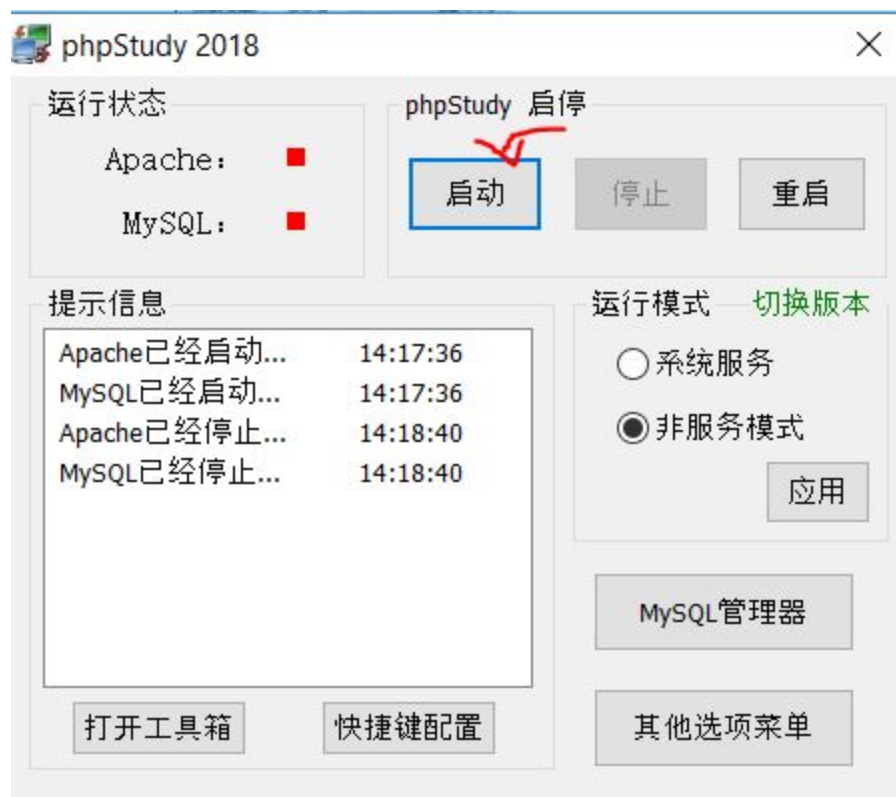

Go to <http://www.phpstudy.net/>

Press the button to download

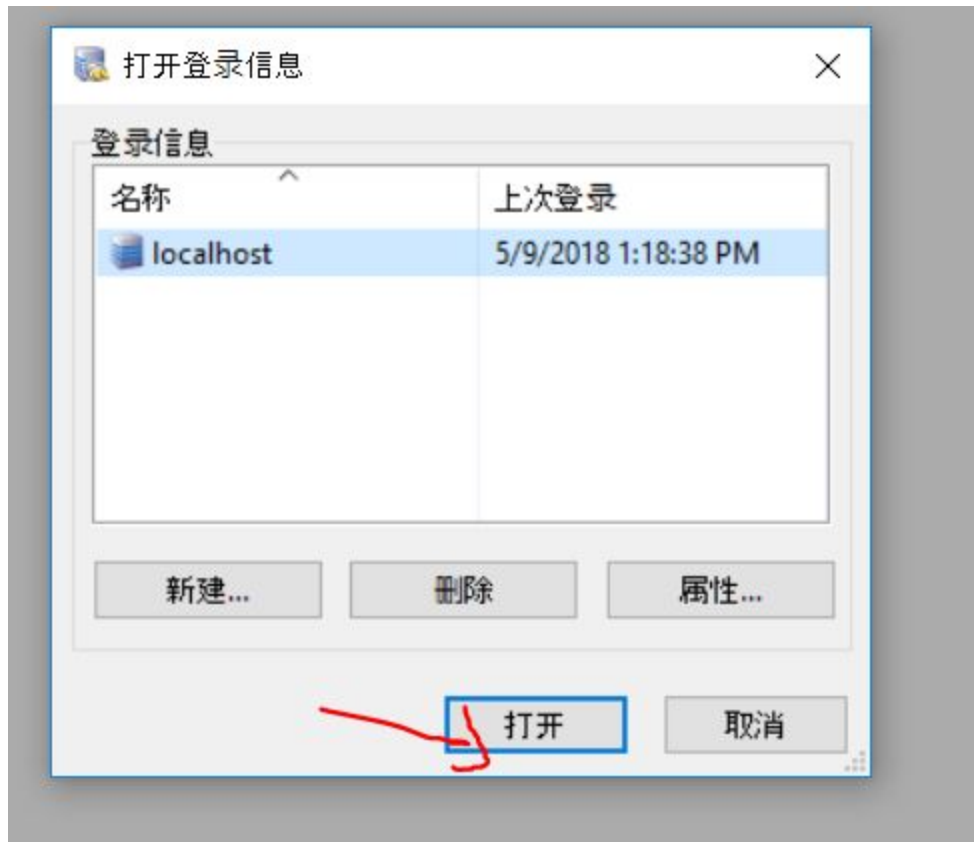

Then press install

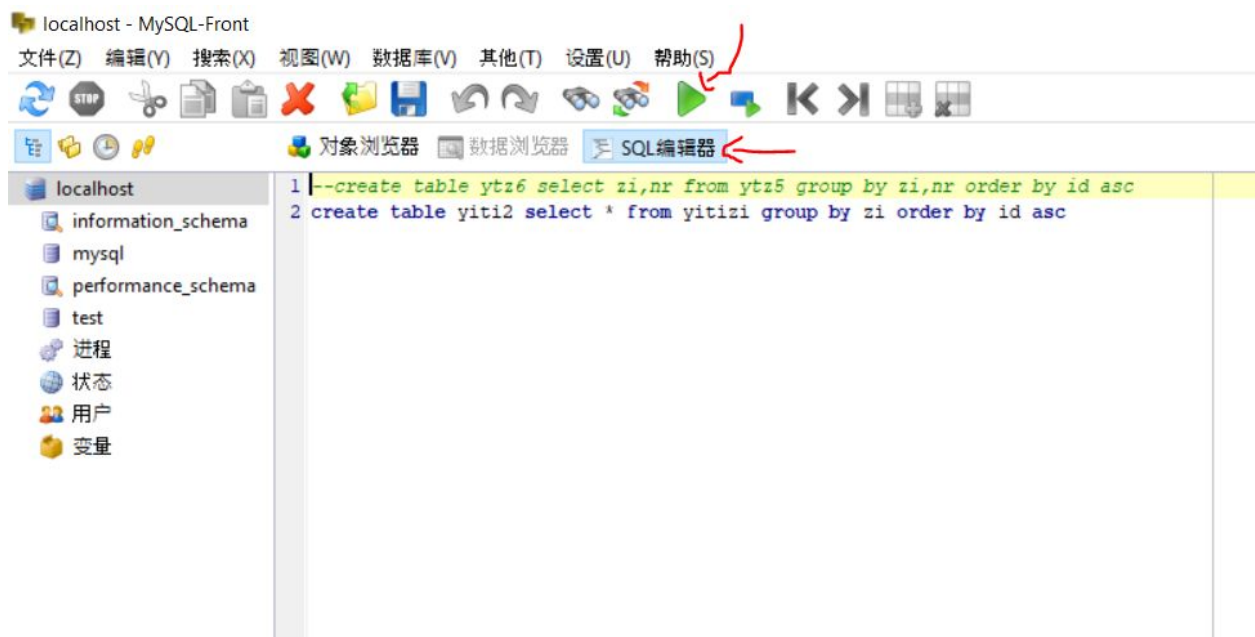

Press the start button to start the local host.

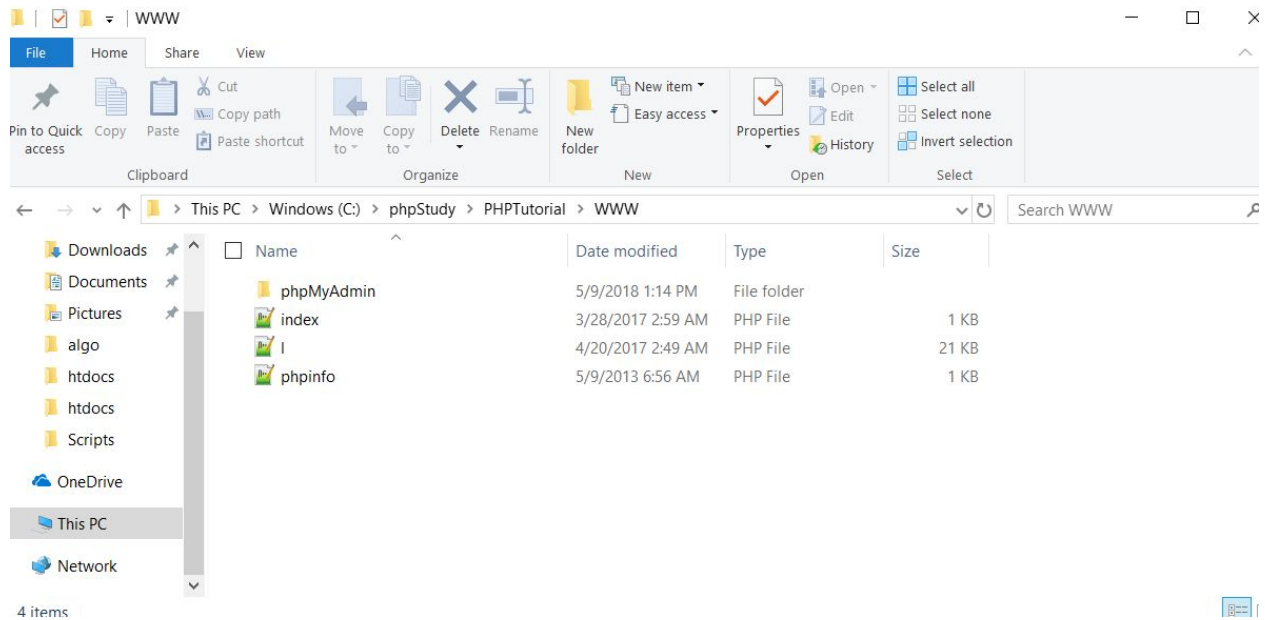

Press the button then press mysql-front to add the database code.

Press the button to access the database code.

Press the sql button to add the code to the database from the github, then run it by pressing the green button.

Go to this directory and put all the backend and frontend files. After that, just type localhost/login.html to access the website.
